### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The allowability resides in the overall structure of the device as recited in independent claims 1, 4, 7, and 10, and at least in part, because claims as amended recite: "temperature-actuated switching means for actuating, independent of any electrical power application". The aforementioned limitations in combination with all remaining limitations of the respective independent claims, are believed to render the claims and all claims dependent therefrom patentable over the art of record.

Furthermore, the aforementioned independent claims have invoked consideration under 35 USC 112 , six paragraph, because they, as amended, recite "means-plus-function" limitation: "a temperature actuated switching means". The specification describes the temperature actuated switching means as a thermally actuated switch, and provides enabling examples of commercially available thermally actuated switches. One disclosed example of a thermally actuated switch is an 5C065 manufactured by Instruments Controls and Measurement Inc., (Paragraph 8 of the specification). Another disclosed example of a thermally actuated switch manufactured by Therm-O-Disc.

The primary reference (US/5,107,918 to McFarlane et al) applied in the rejection of the claims as presented in the final Office action did not disclose the "temperature actuated switching means" as taught by the instant application.

None of the references cited during prosecution of the instant application either taken alone or in combination is believed to render the present invention unpatentable as claimed.
